10-16 June 2019

COMIC STRIP Challenge

DEADLINE:

Thursday 17 July 2019

**Submit your ENTRY
to Miss Cooper (CF07)**

Planning your comic strip

- Think of a type of risk that you would like to focus on or an idea you are interested in exploring further.
- Who are your characters? Is there any information we need to know about them? (e.g. age, job etc.) You can use the scenarios for inspiration
- Think about the story, how are you going to describe it and what is going to happen – your comic strip needs to have **at least 8 boxes**
- Think about the ending, what message do you want to give? Do you want to have a positive or negative outcome?
- You may wish to draw a draft comic strip first to help you plan out the story – think about your use of language and images

Scenarios you could use...

- **Annie** is a keen artist and has decided to enter a local painting competition to win the grand prize of £100. She must pay the entry fee of £10 and then invest in a canvas, paints and new brushes which will cost her in the region of £50. If Annie wins, her painting will be displayed in a local gallery and possibly sold at a charity auction which will get her some great publicity. However, if she doesn't win she will be out of pocket by about £60.
- **Abeo** is considering going to university in England and will have to take out a student loan to pay for the tuition fees and may have to apply for a maintenance loan to cover his day-to-day living costs like accommodation. After studying for a 3 year degree course he could potentially owe the Student Loans Company £53,850. Abeo discovers that he will only repay the loan once he has graduated, got a job and earns over £25,000 per year.
- **Lois** spends £10 a week on National Lottery tickets and dreams about winning the jackpot and deciding how she is going to spend her millions. The most she has ever won is £30 by matching 3 numbers. She reckons that if she doubles the amount she spends each week it will give her a much better chance of achieving her dream but her friend tells her that the chances of actually winning the jackpot are one in 45 million!

**GOOD
LUCK!**
